Nick,

Do you know what the site clean-up plan is regarding the Fort Hood JP8 spill? According to the Fort Hood
Biologist sediment removal from the creek and clearing of riparian vegetation may take place during the
remediation efforts. TPWD has some concerns and would like more information regarding the process. In addition
do you know who the TCEQ lead is on this event? In addition are you the OSC? This event is not listed on the
EPA OSC website.

Thank you for your help.

Subject: FW: Ft Hood Fuel Spill Update (UNCLASSIFIED)

Classification: UNCLASSIFIED
Caveats: NONE

Alan,

I just received this update on Reese Creek:

  - They have been digging up fuel contaminated soil back at the tank farm
and also at the "dam" site, but as of yesterday had not taken out that rock
and concrete structure. I think they were going to try to do that this week
though, or maybe next week at the latest.

  - The soil removal in the creek will take a bit longer to plan and
execute. They're going to have to clear a path through the trees in order
to get the equipment and vehicles to those locations. They offered to plan
that route in coordination with NRMB folks in order to minimize the removal
of desirable vegetation. I'll send you all they're contact info as soon as

I get it.

  - But I'd imagine the entire clean-up process will take many more months and possibly up to a year to complete.

Thanks,
Virginia Sanders
